

ABOUT US

100% Family Owned Australian Company

WHO WE ARE

Beachport Corporation Pty Ltd is a trusted family company with a 'real' commitment to rural Australia. Established in 2006 we manufacture and distribute liquid livestock supplements for cattle, sheep & horses.

Owners Kym & Chris Sutherland are originally from Beachport in the "Limestone Coast" region of SA, which is where the company gets its name. Due to growth and the need for expansion in 2012, the manufacturing facilities and offices were relocated to Mount Gambier.

Kym's experience in the livestock industry educated him on the value of trace elements to livestock and he wanted formulations more suited to livestock needs. Growing up on the land and seeing the benefits of kelp being fed to livestock, created Kym's passion for the livestock industry and animal nutrition together with his drive to combat deficiencies in cattle and sheep.

"I became dedicated to finding a supplementation solution for improving the health and wellbeing of livestock throughout Australia."

Beachport Liquid Minerals was created out of a need for an innovative way to supplement. The aim was to create a versatile, safe and beneficial product that was easily administered saving livestock producer's time and money.

3 IN 1 FORMULATION

Containing a unique combination of trace elements, natural electrolytes and amino acids through the use of seagrass/kelp, this 3-in-1 combination aids in the feed conversion of both dry and green feed with improved absorption and retention in the rumen naturally increasing the production of livestock.

In the past water medication was costly to install, time consuming and the urea component added to the risk of livestock mortalities, so with extensive research we have solved all these issues making water medication safe and simple.

MISSION

To be known as a passionate company who genuinely cares about the livestock industry with a reputation as the supplementation solution of choice dedicated to improving the performance, health and wellbeing of livestock, saving livestock producers time & money.

MADE BY LIVESTOCK PRODUCERS

Kym's respected knowledge of livestock continues to be a large part of the company's success and the evolving product range. His 45 plus years of experience comes from hands on experience in the ongoing battle of trace element deficiencies in livestock, managing properties, natural breeding programs, classing, genetic assessment and animal nutrition.

This balance of experience and technical knowledge gives the company a greater understanding of what is needed in livestock and how to achieve those results, making it possible to customise the company's product range for specific areas of Australia.
