

REDCAP

Improve your horses rehydration & recovery

The BLM Red Cap is formulated specifically to benefit horses after times of work or stress. With the benefits of a trace element combination, electrolytes and amino acids suitable for the equine industry, the Red Cap is designed to assist horses after strenuous exercise to bring them back up, to help with growing out young horses and also broodmares.

BENEFITS

- Key trace elements to aid in muscle protein, muscle strength and function, coat health and condition, growth rate, reproduction, lactation and also the immune system.
- Amino acids and electrolytes in the Red Cap help a horse's recovery after strenuous exercise.
- Kelp / Seagrass extract with over 90 different natural nutrients available for overall health of the horse.
- This product DOES NOT contain UREA.

KEY TIMES OF USE

- For horses not in work, Red Cap can be used year round at 2 week intervals for health & condition.
- Directly after strenuous exercise for horses in work.
- For racehorses, do not use within 2 weeks prior to horses racing. Red Cap is designed for rehydration and recovery after strenuous work.

DRUM SIZES

Available in 1L & 5L Drums

DOSE RATES

To get best results for horses in work or stress:

- 20mls for mature horses after strenuous exercise. 20mls per horse, per 2 weeks (No more than 60mls per 6 weeks).
- 10mls for younger & lighter horses every 2 weeks. (No more than 30mls per 6 weeks.)

Can be added to water supply or mixed with feed.

TARGET ANALYSIS

Amounts in mg/L	
COBALT	2000
COPPER	4000
MANGANESE	4000
ZINC	5300
MAGNESIUM	2800
SELENIUM	1000
POTASSIUM	550
SODIUM	1500
SULPHUR	16,000

This product also contains electrolytes (via fulvic acid) & amino acids (via kelp/seagrass extract).

REDCAP

Application Guidelines

I have been using the Red Cap supplement for a few months now and the difference in our horses is fantastic! We have mustering horses that are purely paddock fed, they receive no other supplements/feeds other than the Red Cap.

WATER TROUGH

(Preferred method)

For the best results we recommend application via the water supply. With most BLM products we would usually recommend using the BLM Dispenser but because you will be using smaller amounts for horses, it is best to pour straight into the water supply.

DOSE STEPS for multiple horses

- Work out how many horses on the water point & multiply by 20mls for mature horses, 10mls for younger and light horses.
- Split the total amount in half and dose in two applications over two days.
- Splitting the total dose ensures the product is evenly dosed.
- Repeat the above process every 2 weeks for a maintenance level.

DOSE STEPS for individual horse

- Dose amount: 20mls for mature horses, 10mls for younger and light horses.
- Pour dose directly into water supply.
- Repeat the above process every 2 weeks for a maintenance level.

FEED APPLICATION

- Mix the required amount of product with a volume of water that is sufficient enough to be able to evenly pour onto the feed.
- Add an extra 10% of product to allow for wastage.
- Dose over 2 applications (not one), unless only dosing an individual horse.
- If you are dosing an individual horse, dose can be applied directly onto feed in one application.

“Working within the animal health sector in a rural reseller business, believe me, I have seen just about every fang dangled new and improved horse supplement on the market! I've tried most but nothing has compared to BLM Red Cap, not only result wise but at a cost of 62c/dose once a fortnight (for a 5L drum), it's a clear winner!

I have 2 ASH geldings which I muster, campdraft, (well, I participate in and regularly donate my money to!) teamsort, cut and pleasure ride on. Both are brown/black “wanna be” black beauties but without rugging and expensive supplements, they fade back to brown.

They are on 80ac of pasture but are only fed a ‘token’ meal, so they come up to get rugged and I can check that they've still got 4 legs each.

They are both precious things and are fussy with feeds, so I was apprehensive about putting 20ml over their small chaff feed. Well, they licked the feeder clean! Since swapping to BLM Red Cap, my feed bill has drastically reduced, no more expensive supplements and my horses have actually picked up more condition and are looking brilliant with their glossy black coats. Internal health on the inside just glows on the outside! Improved feed conversion and feed utilization.. ahem... “Jenny Craig” paddock time!

I'll also mention, my Grandfathers 36 yr old ASH gelding has gone through another 2 winters we didn't see him making since being on BLM Red Cap. He significantly picked up condition and even cantered up and blocked a beast at the water trough the other day!

I would highly recommend BLM Red Cap to anyone, especially those out west who can't justify time and dollars feeding expensive supplements daily, to horses in large paddocks. Water dose or pour over feed once a fortnight! Too easy!”
