BLUECAP

3-in-1 chelated liquid supplement for cattle and sheep to aid in overall production of livestock.

GREENCAP

Beachport's low stress product, formulated for transport, weaning and feedlots.

WHITECAP

The same as Blue Cap but with added phosphorus, for phosphorus depleted regions to aid in overall production of livestock.

YELLOWCAP

Contains extra magnesium for lactating and pregnant animals to help combat grass tetany and milk fever.

BLACKCAP

The same as Blue Cap but with selenium excluded. Formulated for use with other selenium products.

REDCAP

For horses to help maintain condition and improve recovery.

ORGANIC WHITECAP

ORGANIC GREENCAP

Certified by NASAA Organics. There are only very minor differences in our organic formulation from our traditional White Cap and Green Cap.

We recommend purchasing an Empty Dispenser Drum with a Beachport Dispenser. The Dispenser should not be placed on a full drum in the water trough. There needs to be at least 2L of space for air pressure (based on a 20L - 10% of volume).

While many traditional supplements are calculated on a daily dose, it is important to understand that Beachport Liquid Minerals is **NOT** a daily application.

With just one dose over three days in the water trough using the Beachport Dispenser, the unique formulation is absorbed via the small intestine into the bloodstream and can last in the animal's system for up to six weeks.

This equates to just nine applications per year. Based on our popular **White Cap**, the cost is less than \$11 per head / per year.

**price based on a 1000L*

A daily cost reference has been calculated here for clearer understanding of the economical advantages of using Beachport Liquid Minerals.

NOTE: Green Cap is used at key stress times i.e. weaning and transportation.

DOSE RATE CALCULATOR

The Beachport Liquid Minerals dose rate calculator is a useful tool to find the ml per head and total dose amount.

The calculator will also give you a breakdown so you can see the cost per dose over six weeks, daily cost and total costs for dosing your livestock.

SCAN for DOSE RATE CALCULATOR

Use this very simple formula to calculate your supplementation cost per six weeks

$$\frac{\text{No. head}}{\text{Cost per dose}} \times \text{Dose per drum} = \text{Cost per 6 weeks}$$

**NOTE: Green Cap is used at key stress times i.e. weaning and transportation. Red Cap for horses is every two weeks at an adult dose of 20mls.*

Red Cap for horses is slightly different from the cattle and sheep supplements with a 20ml dose every two weeks to maintain health and condition.
