

LOWER STRESS NATURALLY

Calm livestock for weaning, transport and feedlots

Green Cap is aimed at naturally calming livestock to improve ways of coping with stress during weaning, introduction and exit from feedlots, and with the unfamiliar surrounds of yarding and transportation in both short and long haul trips.

Different from other Beachport products, Green Cap is dosed at key times rather than every six weeks, but also includes the benefits of our blend of trace elements, amino acids and electrolytes.

GREENCAP

TRANSPORTATION BENEFITS

- ✓ Natural formulation aids in lowering stress levels. A calmer animal travels better.
- ✓ Decrease shrinkage during transportation.
- ✓ Animals remain hydrated during travel and helps retain moisture for better travel conditions.
- ✓ Application flexibility – for best results use in water supply but can be mixed with feed.
- ✓ Aids in reducing dark cutters and improving MSA grading.
- ✓ Aids with 'dead gut' with animals going back onto feed and water more efficiently.

WEANING BENEFITS

- ✓ Animals cope better with separation and are easier to handle when stress levels are lowered.
- ✓ Animals spend less time 'sulking' and return to feed and water sooner.
- ✓ Helps to reduce weaning time.

FEEDLOT BENEFITS

- ✓ Smoother induction.
- ✓ Animals go back onto feed faster with less downtime.
- ✓ Helps improve feed conversion and supports animals adapting to changes in feed.
- ✓ Exit from feedlot for carcass improvement.

KEY TIMES OF USE

Trucking: Ideal time is between one week to three days prior to trucking. Dosing within a 24hr period of travel will significantly reduce the chance of optimal result/benefits.

Weaning: Add to water either on entry to yards or weaning paddock. Can be dosed one week prior to weaning to also reduce stress on cow.

Feedlots: Add to water as soon as livestock enter yards.

Change in diet: Dose via water or onto feed when there is a major change in feed source.

EVERSLEIGH & WALLACE VALE
DROUGHTMASTERS - QLD
JENNY AND ROGER UNDERWOOD

"We always sell our weaner steers straight off mum to the saleyards and GREEN CAP plays a crucial role in this process to settle and then market our weaners. By the time they go to saleyards, they are completely settled and calm and the buyers really respond to the temperament and quality of the steers. Beachport is a fantastic product that consistently delivers results to our business".

ACTIVE INGREDIENTS

15 AMINO ACIDS
via seagrass and kelp

ORGANIC NATURAL ELECTROLYTES
via fulvic acid

9 CHELATED TRACE ELEMENTS

MAXIMISE YOUR RETURN

Animal welfare can be profitable

In every livestock sale transaction producers are being paid on the presentation of their stock; whether it's weight of animals at the abattoirs, live export, feedlot entry/exit weights, condition of stock when selling through the yards or buying on farm, in all these scenarios' presentation pays.

Using Green Cap is a simple and effective way of naturally reducing stress with visible results during these times of stress.

COST PER HEAD

Drum size	Doses per drum	Cost per 50ml dose	Daily cost
1L	20	\$3.95	\$0.094
10L	200	\$1.66	\$0.040
20L	400	\$1.36	\$0.033
200L	4,000	\$1.25	\$0.030
1000L	20,000	\$1.18	\$0.028

COST PER HEAD

Drum size	Doses per drum	Cost per 10ml dose	Daily cost
1L	100	\$0.79	\$0.019
10L	1,000	\$0.33	\$0.008
20L	2,000	\$0.27	\$0.006
200L	20,000	\$0.25	\$0.006
1000L	100,000	\$0.24	\$0.006

APPLICATION

Apply via water trough using Beachport Dispenser over a three-day period or can be mixed with feed or poured on hay.

You can view how the Beachport Dispenser works via our short animated video on our website or scan the QR code here.

200L & 1000L STARTER PACKS ALSO AVAILABLE

DISPENSER APPLICATION TIPS

- ✓ For best results add water into the drum up to 80% capacity and allow 20% air.
- ✓ Never fill the drum completely.
- ✓ The dispenser works on air and water pressure, so water replaces the product in the drum over the dosing period.

DOSE RATES

Body weight (kg)	Dose rate (mL p/head)
100 - 200 kg	20 mL
201 - 300 kg	30 mL
