

EQUINEELITE

FOR HORSE HEALTH & HYDRATION

OUR EQUINE SPECIALIST.

- ✓ Supports condition, coat shine, hydration and recovery – from the inside out.
- ✓ 16 amino acids • 10 trace minerals • natural electrolytes – in a single dose.
- ✓ Just 20ml every two weeks, straight into the water. No complicated feed routines.
- ✓ Kelp and seagrass extract carrying over 90 natural nutrients.

EquineElite is the horse specialist of the LivestockIQ range, formulated specifically for equine health, hydration and recovery. Where the rest of the range is built for cattle and sheep, EquineElite is tailored to the way horses work, recover and hold condition. Sixteen naturally derived amino acids from kelp and seagrass, led by leucine, isoleucine, lysine and threonine, support muscle repair, recovery after work and coat condition, while chelated trace elements and natural electrolytes help horses get more out of their pasture and hard feed. It contains no urea, and needs no complicated feeding regime, just a simple fortnightly dose straight into the water. Condition, coat and recovery, from the inside out.

CORE BENEFITS - EquineElite helps support:

Muscle & recovery

Trace elements aid muscle protein, strength & function, while amino acids & electrolytes help horses recover after strenuous exercise.

Coat & condition

Helps promote healthy skin, coat shine & overall vitality from the inside out.

Hydration

Natural electrolytes help maintain hydration & fluid balance after work & travel.

Growth & reproduction

Supports growth rate in young stock, & condition through reproduction & lactation in broodmares.

Resilience

Helps build stronger resilience to stress & steadier condition through the year.

Simple & clean

No urea. No complex feed routine. Just 20ml every two weeks in the water trough.

- ✓ Every batch NATA tested
- ✓ 3-year shelf life
- ✓ No Urea

THE REAL DIFFERENCE - THREE COMPONENTS WORKING TOGETHER

Three components, plus over 90 natural nutrients. One bioavailable formulation, working in synergy like no other equine supplement on the market.

Where many horse supplements deliver a single nutrient group, EquineElite brings amino acids, chelated trace elements and natural electrolytes together, drawn from kelp and seagrass extract, so more of what you feed actually reaches the horse.

16 AMINO ACIDS

The building blocks for muscle, recovery and coat condition. Naturally derived from kelp and seagrass, led by **leucine, isoleucine, lysine & threonine**, the ones behind muscle repair, recovery after work and a healthy coat. Their natural ratio supports absorption in a way synthetic amino acids cannot.

10 TRACE MINERALS

Copper, zinc, selenium, cobalt, manganese, magnesium, potassium, boron, sodium & sulphur, all chelated for absorption so they reach the bloodstream rather than passing through. They aid muscle protein, strength & function, coat, growth, reproduction & immune function.

NATURAL ELECTROLYTES

The recovery system. Natural fulvic acid electrolytes help maintain hydration and fluid balance and carry the whole formulation into the cells, supporting recovery after work, travel and stress.

CONDITION, COAT AND RECOVERY, FROM THE INSIDE OUT.

A horse in good condition shows it: a shining coat and a quick bounce-back after a hard day or a long float trip. That condition is built from the inside, on the nutrition and hydration behind it. EquineElite gives horse owners a simple way to support it year-round, in one fortnightly dose straight into the water, without complicated feed routines.

HOW TO USE IT

EquineElite doses are small, so pour straight into the water supply rather than using the ProDispenser. Split the dose over two applications across two days for even dosing, then repeat every two weeks.

- ✓ **Horses not in work:** Dose year-round, every two weeks, for health and condition.
- ✓ **Horses in work:** Directly after strenuous exercise, for rehydration and recovery.
- ✓ **Young stock & broodmares:** Ongoing, every two weeks, for condition and vitality.

DOSE RATES

HORSE	DOSE P/H	FREQUENCY
Younger & light horses	10 mL	every 2 weeks
Mature horses	20 mL	every 2 weeks

COST OF CONDITION

PACK SIZE	MATURE HORSE DOSES PER DRUM	HORSE (20ML) COST PER DOSE	LASTS ONE HORSE
1L	50	\$1.66	Almost 2 years
5L	250	\$0.87	Around 9 years*

Based on a mature horse at 20ml per fortnight. *A 5L pack covers one horse for years, or a small team through the season. All prices RRP ex GST.

DOSING MADE SIMPLE

ONE HORSE

- 1 **Measure the dose:** 20ml mature, 10ml young or light
- 2 **Pour** straight into the water supply, or onto feed.
- 3 **Repeat** every two weeks.

MULTIPLE HORSES

Split the total in half and pour into the water over two days, so every horse on the point gets an even share rather than the first ones drinking the lot. If you're dosing onto feed instead, add an extra 10% to allow for wastage, and you can apply it in one go.

Important note: EquineElite contains cobalt and selenium. Not for use in racing or performance horses where cobalt threshold regulations apply. Do not use within two weeks prior to racing.

ADVANCED NUTRITIONAL SUPPORT

Beyond the trace element profile, this formulation includes bio-synthesised amino acids and natural electrolytes to enhance absorption in the bloodstream, improving nutrient bioavailability and overall effectiveness.

9 x Essential Amino Acids: leucine, isoleucine, valine, lysine, methionine, phenylalanine, threonine, histidine and arginine.

7 x Non-essential Amino Acids: alanine, aspartic acid, glutamic acid, glycine, proline, tyrosine and serine.

MINERAL TARGET ANALYSIS

MINERAL	TARGET	MINERAL	TARGET
Boron (B)	700 mg/L	Potassium (K)	550 mg/L
Cobalt (Co)	2,000 mg/L	Selenium (Se)	990 mg/L
Copper (Cu)	4,000 mg/L	Sodium (Na)	1,500 mg/L
Magnesium (Mg)	2,800 mg/L	Sulphur (S)	16,000 mg/L
Manganese (Mn)	4,000 mg/L	Zinc (Zn)	5,300 mg/L
