

PRODISPENSER. SIMPLE. CONSISTENT. EFFECTIVE.

A smarter way to supplement through the water trough

LESS HANDLING. LESS STRESS. LESS LABOUR.

The LivestockIQ ProDispenser slowly releases the measured dose into the trough over approximately 3 days, giving livestock access as they drink. No pumps, power or daily dosing required.

For our year-round supplements, **one 3-day application** provides **nutritional support for up to 6 weeks**.

MEASURE. CONNECT. DOSE. REPEAT.

MEASURE

Measure the required amount of your chosen LivestockIQ supplement. *e.g 50ml p/h for adult cattle.*

FILL & CONNECT

Fill the DosingDrum with correct amount leaving **20% air space**. Attach the ProDispenser to the drum.

DOSE

Place upside down in trough and the ProDispenser will slowly release product **over 3 days**. Product is replaced by water.

SUPPORTS LIVESTOCK

for up to 6 weeks with one application. **Repeat after 6 weeks** - no yarding required.

WATER ENTERS

DRUM STAYS WEIGHTED

As LivestockIQ supplement is released into the trough, water is drawn back into the DosingDrum. This simple air and water pressure system controls delivery without pumps, power or moving parts. It's normal for a small amount of light, tea-coloured liquid to remain in the drum after three days, so at the end of the application simply empty it into the trough.

IMPORTANT: SET IT UP CORRECTLY

DO NOT attach the ProDispenser directly to a full product drum.

- **Always measure** the correct dose first and pour it into a clean, empty DosingDrum.
- Maintain approximately **20% air space** in the DosingDrum. The pressure system requires this space to operate correctly.
- Allow the DosingDrum to float and **move freely** in the trough.
- **For small doses**, add water to the DosingDrum if extra weight is required to keep it stable.
- Use with LivestockIQ supplements only. Do not mix with other products in the water supply, including urea.
- Repeat timeframe varies across the key time-of-use range. MagBoost, for example, is dosed every 3 weeks through the grass tetany window rather than every 6. Always follow the dose guidelines on the drum.

SCIENTIFICALLY PROVEN DELIVERY SYSTEM.

University trial results demonstrate the effectiveness of our water-based delivery method, with nutritional levels maintained throughout the six-week period. This means less frequent supplementation, saving producers time and money while supporting better animal welfare and a more sustainable approach to supplementation
